Bulletin:

Ceramicx claws back 45% energy savings for thermoformer

Leader in IR heating supply Ceramicx has helped a thermoforming technology champion claw back over 45 per cent in energy savings.

When applied correctly in heat work IR can bring plastics processors substantial process accuracy and efficiency gains, which is what Ceramicx achieved when helping LINPAC with its energy-saving programme of machinery refurbishment in St Helens, UK, and other LINPAC Group sites. Ceramicx offers detailed and empirical IR heat research for thermoformers wishing to optimise their process and materials, saving cost and energy.
